

CAFECONNECT

Промт для генерации полноценного приложения

Этот промт создаёт полноценное FlutterFlow-приложение CafeConnect с нуля. Включает все экраны, логику, анимации и дизайн. Используй его в AI-генераторе FlutterFlow или отдай разработчику.

Create a complete FlutterFlow mobile application called "CafeConnect" from scratch. This is a restaurant automation app with 5 user roles: Client, Waiter, Cook, Bartender, and Manager. The app must be visually stunning, with Apple Design principles, warm cozy tones, and fluid animations. Every screen must be fully functional with proper state management, navigation, and data flow. === DESIGN SYSTEM === Colors (strict, no deviations): - Background: #F5F5F0 (warm white) - Cards: #FFFFFF - Accent/Primary: #007AFF (blue buttons, links, active states) - Success: #34C759 (green, ready, online) - Warning: #FF9500 (orange, new order, attention) - Danger: #FF3B30 (red, error, overdue >20min) - Text Primary: #000000 - Text Secondary: #3C3C43 at 60% opacity - Separators: #E5E5EA - Dark mode: Background #1C1C1E, Cards #2C2C2E, Text #FFFFFF Border Radius: - Cards: 16px - Buttons: 12px - Bottom Sheets: 20px (top corners only) - Hero Banner: 32px - Menu Grid Photos: 16px - Category Chips: 8px (height 34px) - Status Dots: 4px radius (8px diameter) - Avatars: 50% (circle) Typography: Inter (Google Fonts) throughout. No other fonts. - Screen titles: 28px Bold - Card titles: 22px Semibold - Dish names: 17px Semibold - Body text: 16px Regular - Captions/timestamps: 13px Regular Shadows: NONE. Use only background color elevation. No drop shadows anywhere. === SHARED COMPONENTS (create as reusable) === 1. AppButton: Primary (blue #007AFF, white text), Secondary (white, blue border, blue text), Ghost (transparent, blue text). Height 50px, radius 12px. Scale 0.96 on tap with spring release. 2. AppCard: White background, 16px radius, 1px #E5E5EA border, padding 16px. Fade + translateY(20→0) on appear, stagger 50ms. 3. CategoryChip: 34px height, 8px radius. Inactive: white bg, 1px #E5E5EA border, #3C3C43 text. Active: #007AFF bg, white text, checkmark icon. Horizontal scroll. 4. MenuGridItem: 1:1 photo, 16px radius, dish name (17px Semibold), price (#007AFF, Semibold). 2 columns, 12px gap. CachedNetworkImage with shimmer placeholder. 5. OrderCard: White bg, 16px radius, table number + color dot + time, item list with modifiers, live timer, "Ready" button. Timer colors: <15min green, 15-20min orange, >20min red blinking border. 6. StatusBadge: 8px dot with pulse animation for "new" status. Colors: gray (free), orange pulse (new), blue (occupied), green glow (ready), red blink (overdue). 7. StaffMemberRow: Avatar (circle, initials, colored bg), name, role with colored dot, status text. Swipe left for edit/delete. 8. ChatBubble: Own messages — blue (#007AFF) right-aligned. Others — gray (#E5E5EA) left-aligned. 12px radius, tail. Time below in 13px caption. 9. Stepper: (- [quantity] +) with circular buttons 32px, gray bg. Haptic selection on change. 10. HeroCarousel: 16:9, 32px radius, auto-scroll 5s, parallax on scroll, dot indicators, "Details" button overlay with gradient. === SCREEN 1: QR ENTRY === Full-screen camera view. Circular scan zone 200px with animated blue corner markers (L-shapes at corners, pulsing). Dark overlay outside the circle. Bottom: button "Enter code manually" — white, 50px height, 12px radius, #007AFF border. On successful scan: green pulse expands from center, haptic success, auto-transition to CustomerMenu. Manual entry: numeric keypad, 4-6 digits, validates table existence. Error: red shake animation + haptic error. === SCREEN 2: CLIENT MENU (CustomerMenu) === Top bar: "CafeConnect" logo left, "TABLE 04" badge right (black bg, white text, 8px radius). Below: HeroCarousel with seasonal/promo items. Managed by Manager. Auto-scroll, manual swipe, dot indicators, parallax. Below carousel: CategoryChip row (horizontal scroll, sticky on scroll down): All, Coffee, Pastries, Breakfast, etc. Tap filters grid instantly. Menu grid: 2 columns, AppCard wrapping each MenuGridItem. Pull-to-refresh with elastic bounce. Floating search bar: collapsed = icon + "Search menu", expanded = full width, blur bg, live filtering. Bottom: floating cart button (if items > 0) — blue circle 56px, white cart icon, red badge with count (scale 0→1.2→1 spring on add). Tap opens Cart. === SCREEN 3: DISH DETAIL (Bottom Sheet) === Slide up from bottom (spring, 350ms). 16:9 photo top, 32px top radius, parallax scroll. Close: swipe down or X button top-right. Content: Name (22px Semibold) left, price (#007AFF, 22px Semibold) right. Description (16px, gray) max 3 lines, "More" to expand. Allergen chips: Gluten, Eggs, Dairy (gray), Vegan (green), Spicy (orange) — 8px radius. Quantity: Stepper component. Special requests: text field "Special wishes" with placeholder "e.g. no onion, spicy, medium rare". 1px #E5E5EA border, 12px radius, 16px padding. Button: "Add to Order · \$18.50" — Primary AppButton. On tap: scale 0.96, number flies up to cart badge (animated), haptic light, sheet closes with slide down. If already in cart — "Update Order · \$37.00". === SCREEN 4: CART === Grouped by category (Starters, Mains, Drinks). Each item: AppCard with name, modifiers (gray, 13px), price, Stepper. Swipe left: delete with red background + trash icon + haptic medium. Bottom bar: fixed, blur

(BackdropFilter), shows "Subtotal: \$XX.XX" left, "Order" button right (Primary). Tap "Order": morphing button → circular loader → checkmark → "Sent!" (800ms). Haptic medium → success. POST /api/orders. Auto-split: food → Kitchen chat, drinks → Bar chat. Transition to OrderStatus. Empty state: illustration (coffee cup), "Your cart is empty", "Browse menu" button (Secondary). === SCREEN 5: ORDER STATUS === Header: "Order #1284" left, status badge right ("In Progress" orange, "Ready" green). Below: "Table 04 · 12:45 PM". 3-step tracker: circles 48px connected by lines. Accepted (green check, filled) → Cooking (orange fork/knife, pulsing) → Ready (gray, inactive until reached). Active step: #007AFF ring + pulse. Completed: #34C759 fill + checkmark. Status message card: chef icon + "Chef is preparing your Flat White". Item list: AppCards. Each: name, status dot + text (Preparing orange, Ready green), price. Real-time updates via WebSocket. Bottom: fixed bar. "Call Waiter" (Secondary, black bg, white text) + "Request Bill" (Primary). When all ready: "Ready" step turns green, haptic success, confetti burst (optional), "Request Bill" pulses. === SCREEN 6: WAITER TABLE GRID === Header: "Tables View" title, "Floor 1 · 12 Active" subtitle. Right: search icon + filter icon. Legend row: colored dots + labels — Free (gray), New (orange), Occupied (blue), Ready (green), Late (red). Tap filters grid. Grid: 3 columns, square AppCards. Each: table number (28px Bold, center), guest count below (13px, gray), status dot 8px top-right. Status animations: New = pulse, Late = blink. Long press: context menu (modal, blur bg) — "Details", "Close Table", "Change Color". Tap table: if free → opens menu (same as client but editable). If occupied → opens active order details. Bottom: "Add Walk-in" (Secondary) + "My Orders" (Primary, replaces Shift Summary). === SCREEN 7: WAITER ORDER MODE === Same menu UI as client, but: "Add to Order" instead of "Add to Order". Badge shows order count for THIS table, not global cart. Cart view (bottom sheet or full screen): grouped by category, Stepper, swipe delete, modifiers editable. "Special wishes" field per item. Button: "Send to Kitchen" (Primary). Before send: all editable. On send: morphing animation (button → loader → checkmark → "Sent!"). Auto-split confirmation: "Sent to Kitchen ✓" / "Sent to Bar ✓" toast notifications. After send: order becomes read-only. Haptic medium → success. === SCREEN 8: KITCHEN / BAR ORDER FEED === Header: "Kitchen Feed" / "Bar Feed", "X Active Orders" subtitle. Right: sort (time) + filter. List of OrderCards. Each new order: slide in from bottom + sound + haptic medium. Live timer counting up from receipt. Timer colors: <15min green, 15-20min orange, >20min red blinking border. OrderCard content: table number (17px Semibold) + color dot + time badge. Divider. Item list with quantities and indented modifiers (gray, 13px). Live timer (monospace, 17px). "Ready" button: Primary AppButton. On tap: morphing → "Done!" + haptic success. Card fades out (300ms) or moves to "Completed" section. Overdue alert: card border blinks red 0.5s interval + optional sound. Bottom: "System Online" (green dot + text) + "Open Chat" button (Secondary, links to StaffChat for this group). === SCREEN 9: STAFF CHAT LIST === Telegram-style. List of chat groups: avatar (circle, group initials, colored bg), group name (17px Semibold), last message preview (13px, gray, truncated), time (13px, gray), unread badge (red circle, white text, min width 20px). Pinned chats at top with pin icon. Online status: green dot 8px on avatar. Swipe left: Pin / Mute / Delete (with confirmation). Tap: opens chat. === SCREEN 10: STAFF CHAT SCREEN === Header: back arrow, avatar, group name (17px Semibold), "X members online" (13px, green dot). Right: info icon (i). Messages: ChatBubble component. Tags (#orders, #kitchen, #inventory) — blue and tappable. Tap filters all messages with that tag in this chat. Voice messages: hold microphone button → recording animation (red pulse) → release to send. Waveform visualization, playback speed 1x/1.5x/2x (toggle on tap). Quick replies: long press message → context menu: "Coming now", "One minute", "OK", "On my way". Reactions: long press → emoji bar (👍 🍻 🍷 🍹). Reaction appears as small emoji below message. Pinned message: stays at top of chat, dismissible. Input: + button (attachments), text field "Message...", microphone (hold for voice), send button (blue circle, white arrow, appears when text entered). Typing indicator: "Someone is typing..." with 3 animated dots. === SCREEN 11: MANAGER — TEAM MANAGEMENT === Header: "Management" title, "Staff & Permissions" subtitle. Right: + icon (add member). List: StaffMemberRow components. Role colors: Manager (purple #BF5AF2), Waiter (blue #007AFF), Chef (orange #FF9500), Bartender (green #34C759), SMM (pink #FF2D55). Status: Online (green dot), Shift Active, In Kitchen, Break (orange), Off Duty (gray), Offline (gray). Tap row: opens detail/edit screen. Swipe left: Edit / Delete. "Add New Member" card: white, 16px radius, 1px border, centered text. Tap opens form: Name (text field), Role (picker: Manager, Waiter, Chef, Bartender, SMM), Login (text field), Password (text field, toggle visibility). Button: "Create" (Primary). No email invitations — credentials issued manually. "Communication Groups" section: "Create New Group" card. Tap: form with name field + member picker (multi-select from team list). Created groups listed below with member count. === SCREEN 12: MANAGER — MENU MANAGEMENT === Header: "Menu Inventory" title, "Toggle item availability" subtitle. Right: "Edit Menu" button (Secondary). Category chips: Coffee, Pastries, Kitchen, Seasonal. Horizontal scroll, active = gray fill. Tap filters grid. Grid: 2 columns, MenuItem + toggle switch (Available / Not Available) on each card. Toggle: iOS-style, green when on, gray when off. Instant state change, no reload. "Edit Menu" → full editor screen: photo upload (tap to change), name, description, price, category (picker), tags (multi-select: Vegan, Spicy, Gluten-free, etc.), prep time (minutes), toggle "Available". Save button (Primary). "Hero Banner" section: list of promotional items with drag handles to reorder. Toggle "Active" per item. "Add Promo"

button. Max 5 items in carousel. === SCREEN 13: MANAGER — DASHBOARD === Compact overview: team list (top 4 staff, tap to see all), menu preview (top 4 items, tap to see all), quick actions: "Create Group", "Add Member", "Edit Menu", "Hero Banner". No statistics. No charts. No shift summary. Focus on functionality only. === ANIMATIONS (mandatory, no exceptions) === - Button tap: scale 0.96 → 1.0 spring, 200ms, on EVERY button - Card appear: fade + translateY(20→0), stagger 50ms between items - Card badge: scale 0→1.2→1 spring, 400ms - Bottom sheet: slide up spring (damping 0.8), 350ms; close: slide down - Send button morphing: button → circular loader (rotate) → checkmark (scale pop) → "Sent!" (fade), 800ms total - New order on kitchen: slide in from bottom + haptic medium + sound, 400ms - Status ready: pulse + glow, 600ms loop - Overdue: border blink red, 0.5s interval, continuous - QR success: green circle expands from center + haptic success, 500ms - Pull-to-refresh: elastic bounce + shimmer, not spinner - Page transitions: shared axis (horizontal slide), 300ms - Delete swipe: red background slides in, item slides out, 250ms - Image load: shimmer placeholder → fade in image, 300ms - Typing dots: 3 dots, scale 0.5→1 stagger 150ms, loop === HAPTIC FEEDBACK === - Light: tap button, card, chip, stepper change - Medium: send order, delete item, long press - Success: order ready, QR scanned, login success, message sent - Error: invalid code, no network, validation fail, login wrong - Selection: stepper value change, segmented control, picker scroll === STATE MANAGEMENT === Use App State for: - Current user (role, name, token) - Current table (number, color, status) - Cart (items, quantities, modifiers) — persists offline - Active orders (for waiter) - Chat messages (last 50, load more on scroll) Use Page State for: - Form inputs - Scroll positions - Filter selections === OFFLINE LOGIC === - Cart saves to local storage (hive). Syncs when online. - Menu caches last fetched version. Shows cached if offline. - Chat drafts save locally. Send when connection restored. - Order queue: if no network, order stores locally, retries every 5s, notifies user. - "No connection" banner: top of screen, red, dismissible, reappears on retry fail. === NAVIGATION === Role-based routing after login: - Client → CustomerMenu - Waiter → WaiterTableGrid - Cook → KitchenOrderFeed - Bartender → BarOrderFeed (same UI as kitchen, filtered drinks) - Manager → ManagerDashboard Bottom nav (where applicable): Home / Tables / Chats / Profile. Active: blue icon + label. Inactive: gray icon only. === DATA MODELS === User: id, name, role, login, password, avatarUrl, status, online Table: id, number, color, status, guestCount, currentOrderId MenuItem: id, name, description, price, category, imageUrl, tags, prepTime, available OrderItem: menuItemId, quantity, modifiers, price Order: id, tableId, items, status, createdAt, splitTo (kitchen/bar) ChatGroup: id, name, members, type (kitchen/bar/general/custom) Message: id, groupId, senderId, text, tags, type (text/voice), timestamp, reactions === API INTEGRATION (REST + WebSocket) === REST: - POST /api/auth/login → {token, user} - GET /api/menu → {categories, items} - POST /api/orders → {orderId, status} - GET /api/orders/{id} → order details - GET /api/staff → staff list - POST /api/staff → create staff - GET /api/groups → chat groups - POST /api/groups → create group WebSocket: - /ws/orders → real-time order status updates - /ws/chat/{groupId} → real-time messages === FINAL REQUIREMENTS === - EVERY screen must be fully functional. No placeholders. No "coming soon". - EVERY button must do something. No dead buttons. - EVERY animation must be implemented. No static screens. - Design must be pixel-perfect. No misaligned elements. No wrong colors. - App must work in portrait only. - Minimum Android API 24. - Russian language for all UI text (MVP). - No statistics. No charts. No shift management. No payment integration. Focus on core flow only. - Make it feel human. Warm. Cozy. Like a favorite café, not a corporate tool. Generate the complete FlutterFlow project with all pages, components, actions, API calls, and state management configured.

Как использовать этот промт:

1. Скопируй весь текст выше (в синей рамке)
2. Вставь в AI-генератор FlutterFlow (AI Gen → Full App) или отдай разработчику
3. После генерации проверь каждый экран по макетам из PDF-описания
4. Доработай цвета, анимации и тексты под свой вкус

Удачи с проектом!
